

Press Release

WorkflowGen Enables Mobile Users To Perform Workflow Actions Via Personal Digital Assistants (PDA).

Montreal, Canada - (April 26, 2006): ADVANTYS is a leading ISV offering the WorkflowGen workflow software. WorkflowGen is used worldwide by SME as well as global companies to quickly and easily automate their business processes.

"This new feature of WorkflowGen enables the users to directly launch workflow actions from a PDA like BlackBerry (TM) or any other email clients without connection to the WorkflowGen web application. Users are notified via email when they have an action to do and then they can perform the workflow action by simply sending an email." says Alain Bezancon President of ADVANTYS.

Traveling users without access to the enterprise intranet or extranet can handle their workflow actions in real time. Repetitive workflow actions can be handled directly via the email client and therefore improve the productivity by reducing the number of clicks and interfaces to work with. Participants external (outside the firewall) to the enterprise can easily be added to the workflows thanks to email approval without having to give them an access to the intranet or extranet. Email notifications are dynamically generated and managed by WorkflowGen depending on the parameters customized by the workflow administrators.

The contents and layout of the emails are customizable.
The emails can be populated with process data.
The emails support HTML or text formats.
This feature supports SMTP and POP3 protocols.

About ADVANTYS

Established in 1995, ADVANTYS is a leading ISV offering the the WorkflowGen workflow software. The WorkflowGen workflow software is fully web based and enables the end users to complete and monitor processes online. Adobe Acrobat PDF and .Net Web forms can be used as electronic forms. The design and implementation of the workflows are realized online via a graphical mapping interface without programming. The WorkflowGen workflow software is based around a practical technical solution integrating tried and tested development standards (XML, ASP, .NET). WorkflowGen's scalable architecture, and its ability to incorporate additional development, provides for easy integration with existing databases and applications including Microsoft Sharepoint Portal Server and WSS. WorkflowGen is available in 10 languages and distributed in 30 countries
