

Press Release

WorkflowGen offers an easy way to add workflows to SAP.

Montreal, Canada - (October 19, 2006): ADVANTYS is a leading ISV offering the WorkflowGen workflow software. WorkflowGen is used worldwide by organizations of all sizes to quickly and easily automate their business processes.

"The new WorkflowGen SAP Adapter enables the users to quickly and easily integrate SAP transactions to their processes automated with WorkflowGen and also provides SAP with a lightweight front end for advanced workflow features." says Alain Bezancon President of ADVANTYS.

WorkflowGen SAP Adapter simplifies the execution of SAP transactions from a WorkflowGen process or from a .Net Web Form without the need for a new middleware because it uses standard SAP API.

The WorkflowGen SAP Adapter comes in two modules:

- A .Net Web Service to be used from WorkflowGen processes (import/export of SAP data via SAP transactions calls)
- A .Net assembly to be used within Web Forms (to bind listbox, gridviews, etc. with any SAP data via SAP transaction calls)

WorkflowGen SAP Adapter enables the automation of all kinds of processes (e.g. user management, sales, finance, production) in which data from SAP can be dynamically displayed in a form then routed in a workflow and finally exported to SAP after a final validation.

Because WorkflowGen SAP Adapter relies on standard SAP APIs it is possible to use it with a large number of SAP modules and versions.

About ADVANTYS

Established in 1995, ADVANTYS is a leading ISV offering the WorkflowGen workflow software.

The WorkflowGen workflow software is fully web based and enables the end users to complete and monitor processes online. Adobe Acrobat PDF and .Net Web forms can be used as electronic forms. The design and implementation of the workflows are realized online via a graphical mapping interface without programming.

The WorkflowGen workflow software is based around a practical technical solution integrating tried and tested development standards (XML, ASP, .NET). WorkflowGen's scalable architecture, and its ability to incorporate additional development, provides for easy integration with existing databases and applications including Microsoft Sharepoint Portal Server and WSS. WorkflowGen is available in 10 languages and distributed in 30 countries
