

Press Release

ADVANTYS releases version 5.1.7 of the WorkflowGen BPM / Workflow software

Montreal, Canada - (June 26, 2009): ADVANTYS is a leading ISV offering the WorkflowGen BPM / Workflow software. WorkflowGen is used worldwide by organizations of all sizes to quickly and easily design, deploy, execute, monitor and analyze their automated business processes.

Among several improvements the new release of WorkflowGen offers 2 new features. The Overdue Pre-Notification, enables notifications to be set up prior to an action coming due and the Database Scaling, allows for the use of optimized read/write distributed databases across a wide area network to improve performance and user experience. Database Scaling may be used in a single production instance, or in a web farm environment.

For 1 or 1000 processes to automate and 10 to 100 000+ users to manage, the WorkflowGen BPM / Workflow software offers a flexible yet powerful environment to implement both simple and very complex workflows involving human and system based actions.

The WorkflowGen BPM / Workflow software is fully web based and enables the end users to complete and monitor processes online. .Net Web Forms forms are used as electronic forms. The design and implementation of the workflows are realized via a web browser with a graphical mapping interface without programming.

The WorkflowGen BPM / Workflow software is based around a practical technical solution integrating tried and tested development standards. WorkflowGen's scalable architecture, and its ability to incorporate additional developments, provide for easy integration with existing databases and applications including Microsoft Sharepoint and SAP.

About ADVANTYS

The WorkflowGen BPM / Workflow software is edited by ADVANTYS. Since 1995 ADVANTYS specializes in the implementation of high added-value solutions in the field of B2B web solutions. Over the past decade ADVANTYS has developed a suite of robust and innovative solutions used daily by hundreds of organizations worldwide.
