

# Press Release

---

## **ADVANTYS releases version 5.4 of the WorkflowGen BPM / Workflow software with a Built-in Web Form Designer allowing Form Life Cycle Management.**

Montreal, Canada - (November 29, 2011) ADVANTYS is a leading ISV offering the WorkflowGen BPM / Workflow software. WorkflowGen is used worldwide by organizations of all sizes to quickly and easily design, deploy, execute, monitor and analyze their automated business processes.

Among multiple improvements, the new release of WorkflowGen offers a major new feature: a built-in, web based form designer. WorkflowGen is the only workflow / BPM product to offer a process lifecycle management environment that enables both Business Users and IT People to maximize their respective skills. Business Users use tools that enable them to quickly materialize the forms and business rules without any programming skills. Then, if necessary, IT People can enhance this initial process version by adding complex integration functions and/or transforming the web form into a sophisticated web app.

The built-in web form designer is 100% web based, fully integrated in WorkflowGen, highly customizable, dramatically reduces the time to create professional looking web forms without programming and generates .Net code on the fly when adding more complex features is necessary.

### **Instant form creation**

- Fully web-based (no plugins required)
- Seamless integration in WorkflowGen
- WYSIWYG, intuitive interface
- Drag and drop form fields and sections
- Ready to use Sections for super fast design

### **Powerful tools**

- Gridview with calculations
- Advanced attachments management
- Databinding (SQL, Web Service, XML)
- Dependent lists
- Field management (Required/Readonly/Hidden activates based on a custom condition)
- Field validations (RegEx, Range, Custom and Compare)

### **Reusability**

- Section/Field duplication
- Save a custom section/field as a reusable template
- Full customization of the form fields and form layout
- Change CSS file for advanced customization
- .Net Web Forms generated on the fly (editable in Visual Studio)

### **About WorkflowGen**

For 1 or 1000 processes to automate and 10 to 100 000+ users to manage, the WorkflowGen BPM / Workflow software offers a flexible yet powerful environment to implement both simple and very complex workflows involving human and system based actions.

The WorkflowGen BPM / Workflow software is fully web based and enables the end users to complete and monitor processes online. .Net Web Forms forms are used as electronic forms. The design and implementation of the workflows are realized via a web browser with a graphical mapping interface without programming.

The WorkflowGen BPM / Workflow software is based around a practical technical solution integrating tried and tested development standards. WorkflowGen's scalable architecture, and its ability to incorporate additional developments, provide for easy integration with existing databases and applications including Microsoft Sharepoint and SAP.

### **About ADVANTYS**

The WorkflowGen BPM / Workflow software is edited by ADVANTYS. Founded in 1995 by the current management team, ADVANTYS specializes in the creation of information systems designed to simplify complex business communication exchanges. ADVANTYS' products are deployed by thousands of customers worldwide to automate processes, publish web sites, collaborate and develop web applications.
